

SKIN  
exigence

*Award Laureate of the 7th  
« Creation of Innovative Companies » contest*

**Skinexigence** is a French company specialized in the **evaluation of the efficacy of dermo-cosmetic products by innovative techniques.**

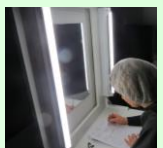

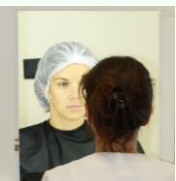

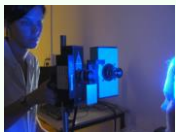

**Expertise in biometrology associated with image analysis** provides solutions for the assessment of:

- micro and macrorelief
- dryness, scaling
- pigmentation
- microcirculation
- make up
- ageing
- ...

Skinexigence provides Cosmetic Laboratories with specific and adapted means in the assessment of their products by **modélisation and image analysis techniques**. Particular attention is given to the valorisation of **qualitative and illustrative information** from the images, but also more specifically to the extraction of **quantitative data** (neural detection, colorimetric and/or geometric analysis, granulometry, profilometry, factorial analyses...)

The study of the **cutaneous flora** has recently been added to the company's range of services.

Besançon, recognized as the capital of the microtechniques industry, has acquired worldwide reputation in cutaneous engineering.

In partnership with Smaltis, a company specialized in bacteriological analyses (located in the same building) (www.smaltis.fr), and Bioexigence (www.bioexigence.com) specialized in *in vitro* tests, Skinexigence covers the fields of clinical research and fundamental research. The companies' synergy and competence complementarity constitute a **centre of expertise in skin evaluation**.

**Creation of the company :** February 2nd, 2006
